PUBLIC HEALTH FACILITIES INCREASE

SANITATION SERVICE EXPANDED -- Meditsinskiy Rabotnik, No 28, 13 Jul 49

The sea and river ports of Latvia are very active now. Steamships and barges are loaded and unloaded continuously at the docks. Hygiene and sanitation workers are carefully watching the sanitary conditions of ships and ports. Sanitation service for water-transport workers has been expanded considerably. Two new sanitation-epidemiological stations have been organized in Lepaya and Ventpils, at Ventpils there is a sanitation-bacteriological laboratory. The sanitation-epidemiological station in Riga has been enlarged and re-equipped, and a hygiene division has been established.

LISTS FACILITIES IN NORTH OSETIAN ASSR -- Meditsinskiy Rabotnik, No 28,
13 Jul 49

The republic now has 81 dispensaries and polyclinics, 11 tuberculosis dispensaries and cabinets, 15 venereological dispensaries and points, 34 sanitation-epidemiological and malaria stations, 58 drugstores, 17 X-ray machines, 16 clinical and bacteriological laboratories, 25 women's and children's consultation stations, 14 milk centers and 5 first-aid stations. There is one doctor for every 800 people. The North Ossetian ASSR now has a Medical Institute, an Institute of Epidemiology and Microbiology, and a Uterological School.--N. Khadzharagov, Minister of Public Health, North Ossetian ASSR, Dzaudzhikau

PRIMORSKIY KRAY SERVICES EXPAND -- Meditsinskiy Rabotnik, No 28, 13 Jul 49

A new medical-sanitation section has been organized in the largest shaft (3-Ta) of the Artem coal trust. Major reconstruction work on the hospital of the Tavrichan mine (Artem coal trust) is being finished. A physiotherapy cabinet has been set up at the Suden hospital.

The Voroshilov public health department has added 300 beds in the new hospital building. Therapeutic, traumatological, and surgical divisions have been opened. Special sections have been set up for ophthalmological, laryngological, and neurological cases.

The Kray public health department examined workers in the polymetallic mines of Tetyukhe Rayon for silicosis for the first time. Those with silicosis were transferred to surface work and their diet increased. A prophylactic unit was opened. Deep drilling was introduced in the mines, reducing the silicosis morbidity rate considerably.

The Primorsky Kray public health department is systematically carrying out specialized training for doctors. Eleven surgeons, eight X-ray specialists, a gynecologist, an ophthalmologist, a phthisiatrist, and a laryngologist, are being trained for rayon hospitals in the Vladivostok Kray hospital.
